Professional Summary

Full-Stack Developer experienced in building scalable web and mobile applications with **React.js**, **Next.js**, **React Native**, **Node.js**, and **TypeScript**. Proficient in **REST APIs**, **GraphQL**, **AWS SQS**-based event-driven systems, **SQL/NoSQL** databases, **Dockerized deployments**, and **CI/CD pipelines using GitHub Actions**, with a strong focus on performance and reliability.

Experience

Application Developer, Zippee Feb 2026 – Present

- **Led** the migration of a production **React Native** rider app from REST to a typed **GraphQL** gateway, replacing **29 RTK Query** modules with **71 typed Apollo Client v4 operations** via GraphQL Codegen across **230+ files**, eliminating **3,300 lines** of hand-rolled REST plumbing.
- **Architected** the app's **GraphQL networking layer** as sole author: Apollo HttpLink chain, per-request auth link, and a refresh-then-logout error link backed by a single **refreshToken** mutation shared across GraphQL and legacy REST callers.
- **Built** the backend-driven **rider onboarding funnel** end-to-end: **11 screens** (KYC, PAN/Aadhaar/DL/RC/insurance, employment, bank, nominee) with **9 React Hook Form + Yup** validation hooks and a routing engine mapping **7 onboarding steps to 8 account states**, making the server the source of truth for funnel position.
- **Shipped** in-app **UPI/COD collection** using **Razorpay** dynamic QR, implementing a 7-state payment hook with **3-second status polling**, app-kill recovery, and idempotent payment reconciliation.
- **Eliminated 28,000 lines** of dead flow code across **108 files** in a sequenced, verified refactor ending with a zero-dead-reference **TypeScript** pass.
- **Diagnosed and fixed** an **Apollo cache-normalization** bug causing riders to see the wrong delivery address and coordinates on manifest cards, resolved via a custom cache type policy.
- **Authored** the rider-gateway **API contract** (345-line integration guide + 160-line gap analysis) and drove **12 schema gaps** to closure with the backend team, including address autofill, vendor search, and OCR document extraction.

Associate Software Engineer, CareerCarve Aug 2024 – Feb 2026

- **Led** migration from **Expo SDK 50 to SDK 53**, resolving Android/iOS build blockers and stabilizing **production releases**.
- **Built** a scalable **frontend profile management system** used by **3,000+ users**, reducing manual profile completion time by **40%** by converting **AI-parsed resume data** into editable, structured profile sections with optimized state handling.
- **Developed** scalable **Node.js RESTful APIs** using **Express.js** and **GraphQL** supporting core user profile and application workflows.
- **Designed and implemented** auto scalable **DynamoDB schemas**, ensuring consistent profile initialization and reliable data access for **3,000+ authenticated users**.
- **Built** event-driven backend systems using **AWS SQS** to enable **asynchronous synchronization** of user profile data from **DynamoDB** to analytics-focused downstream services.
- **Monitored and reduced** Firebase Crashlytics crash rate by **12%**, addressing frequent Android navigation-related crashes.
- **Owned** end-to-end mobile delivery by implementing **CI/CD pipelines with Expo EAS** to automate builds and deployments to **Google Play Internal Testing** and **Apple TestFlight**, resolving **6+ Gradle and native dependency** build issues.

Projects

Imagify AI (Node.js, React.js, Express.js, MongoDB) Oct 2025

- **Integrated AI-powered image generation** using prompt-based inputs, enabling users to generate images seamlessly through an intuitive UI. **[Live Link]**
- **Implemented password reset and secure authentication** using JSON Web Tokens and bcrypt password hashing.

Swiggy-Inspired Food Ordering Platform (React, Redux, Tailwind CSS, Firebase) Apr 2024

- **Built** a scalable, component-driven frontend using **React.js** to replicate core food ordering workflows. **[Live Link]**
- **Integrated** external APIs to fetch and render dynamic restaurant and menu data with efficient **state management**.

Technologies

Languages: JavaScript, TypeScript, SQL, Python
Frontend Technologies: React.js, Next.js, React Native, Redux, Redux Toolkit, TanStack Query, Apollo Client, HTML5, CSS3, Tailwind CSS, MUI
Backend Technologies: Node.js, Express.js, RESTful APIs, GraphQL, GraphQL Codegen
Databases: MongoDB, MySQL, DynamoDB, PostgreSQL
Cloud & Deployment: AWS (SQS, DynamoDB, S3), Docker, Github Actions, Firebase App Distribution
Developer Tools & Platforms: Git, Postman, Firebase, Easebuzz, Socket.io, SonarQube, Razorpay

Education

MCA	Vellore Institute of Technology	8.44	2023 - 2025
B.Sc (Hns) Computer Science	University of Delhi	8.581	2020 - 2023
